## ABOUT

*Passionate about crafting scalable and efficient software solutions by leveraging modern development methodologies.*

## EDUCATION

### Artificial Intelligence for Smart Sensors and Actuators (Master of Engineering)

Deggendorf Institute of Technology

📅 03.2022 - 03.2025    📍 93413 Cham

### Mechanical Engineering (Bachelor of Technology)

Vellore Institute of Technology

📅 07.2016 - 06.2020    📍 Vellore, Tamil Nadu, India

## EXPERIENCE

### Qt Application Developer

Persystems

📅 01.10.2024 - 28.02.2025    📍 Franz-Mayer-Straße 1, 93053 Regensburg

- Developing Virtual Testbench, a Simulation Windows Application for industrial and automotive electric components, using C++ and the Qt Framework. Virtual TestBench is a lightweight alternative to LabVIEW.
- Implemented Licence check service in the Virtual Testbench.

### Qt Application Working Student

Persystems

📅 01.07.2024 - 01.10.2024    📍 Franz-Mayer-Straße 1, 93053 Regensburg

- Created a visual nodes system where users can drag, drop, and connect various simulation electronic components with their interfaces to run the simulation using the Qt Nodes library.
- Utilizing Qt Creator as the Integrated Development Environment (IDE) for GUI development.
- Iteratively optimising the UI and UX for better User Flow using MVC architecture.

### Master Thesis in ADAS Virtual Validation

AVL Software and Functions GmbH

📅 01.11.2023 - 01.05.2024    📍 Im Gewerbepark B29 93059 Regensburg

- Engineered a co-simulation platform for AV ADAS verification and enhanced AVL's FMU Generation Utility to FMI 3.0 with C++ for integration with Carla and esmini, adhering to ASAM standards.

### Working Student

AVL Software and Functions GmbH

📅 15.02.2023 - 31.10.2023    📍 Im Gewerbepark B29 93059 Regensburg

- Worked in ADAS Digitalization, focusing on engineering environments, including demonstrating SOA (Service-Oriented Architecture) with Adaptive AUTOSAR for automobiles.
- Analyzed middleware technologies like ROS 2 and Adaptive AUTOSAR, and developed C++ applications and tools for Adaptive Application deployment using Azure DevOps.
- Optimized RT Linux OS via Yocto for real-time automotive systems, ensuring efficiency across ECUs.

## SKILLS

C / C++  
Qt Framework / QML  
Linux / Unix Systems  
CMake / Make  
SQL / PostgreSQL  
CI / CD  
Docker / Kubernetes  
Agile Development  
Azure DevOps  
Git / Bitbucket  
Visual Studio

## PROJECT

- 🔗 **137Neutron**    📅 08.2025  
Check at [137studios.net](https://137studios.net). An Unreal Engine plugin suite for AI-driven texture compression, achieving 4.5x better compression than BCn methods (under development). Utilizes neural networks to compress PBR textures, reducing game sizes while maintaining quality. Features Neutron Editor for async-batch compression and Neutron Runtime for optimized load times. Currently PC-focused, with plans for multi-platform support.

## HOBBIES

Video Games    Cycling  
Classic and Hard Rock

## LANGUAGES

English  
German  
Hindi
